HONORS & AWARDS

CARTIFY (IOT PROJECT)

Cartify is an advanced trolley system designed for use in shopping malls. With Cartify, customers can conveniently scan products as they add them to their trolley. They have the flexibility to set purchase limits and remove items as needed. Upon completing their shopping, customers can generate a bill with the press of a button. The bill is sent directly to the customer's mobile number with a hyperlink. Clicking the link opens a web application where customers can request assistance and process payment.
